

DEWATERING BAG INSTRUCTIONS

AIRE Environmental Dewatering Bags simplify the dewatering process. They require little or no excavation and are easy to install. Dewatering Bags are constructed of permeable geotextile fabric that filters out sediment, discharging clean water into the environment.

WHAT YOU NEED TO KNOW

SITE PREP

1. Find or build a level deployment surface that is at least as big as the Dewatering Bag.
2. Clear any debris from the deployment area.

DEPLOYMENT

1. Remove the Dewatering Bag from its packaging and unfold it on the deployment area.

NOTE:

Make sure the Dewatering bag fits within the deployment area. If it hangs off the side it may roll away.

2. Insert the hose into the intake and secure it to the bag with the included cable ties.

USE

The Dewatering Bag will loft as it filters the water. If it becomes pressurized, or starts to dome, stop pumping, wait for the water to flow out and then resume operations.
