

DRIP POUCH

AIRE Environmental Drip Pouches are an easy and economical way to contain fluids that may drip from hose connection points. They are a pollution prevention technique that meets environmental containment and recovery regulations. Drip Pouches are constructed using a combination of PVC and absorbents to capture and hold leaking fluids.

WHAT YOU NEED TO KNOW

- Durable PVC exterior/outer shell
- Simple design
- Inner absorbent layer to help contain leaks
- Grommet and string attachment
